

# WEB DEVELOPMENT

## **1. What is the importance of CSS?**

\*CSS is important because it controls all design-related aspects of your website. Typography, colours, page layouts and any other visual aspects of your website are all controlled by CSS

## **2. What are the types of CSS?**

\***Inline CSS** - Putting CSS into an HTML file instead of an external CSS. Since inline CSS allows the application of a unique style to one HTML element, its usage is limited but is beneficial for creating unique attributes.

\***Internal or Embedded CSS** - This can be used when a single HTML document must be styled uniquely. The CSS rule set should be within the HTML file in the head section i.e the CSS is embedded within the HTML file.

\***External CSS** - is a separate CSS file that can be accessed by creating a link within the head section of the webpage. Multiple webpages can use the same link to access the stylesheet.

## **3. How to change the background color?**

The CSS background properties are used to add background effects for elements. In following , you will set CSS background properties:

background-color

background-image

background-repeat

background-attachment

background-position

background (shorthand property)
